

CLEANING AND MAINTENANCE INSTRUCTIONS

The cabinet frames are made of powder-coated sheet steel.

CLEANING

Primarily dry cleaning methods are recommended such as:

- Wiping with a dry cloth
- Dry mopping
- Vacuuming

If necessary, surfaces may be wiped with a damp cloth. For more stubborn stains, use:

- Soap
- Synthetic detergent

If moist cleaning methods are used, always follow up by wiping with a dry cloth to ensure that all moisture and cleaning agents are removed.

Avoid the use of water and detergents on the following materials:

- Veneered MDF-board
- Edge-glued wood in pine, beech and birch wood.

Cleaning should be carried out approximately once a month or as needed.

ATTENTION!

We strongly advise against the use of steel wool or similar abrasive materials, as they may scratch the surface.

MAINTENANCE

Under normal conditions, Tunnplåt cabinets do not require any special maintenance beyond regular cleaning.

- The cylinderlocks normally do not need to be lubricated.
- Any minor paint damage can be repaired with touch-up paint.
- Doors, locks and bench seats are easily replaceable.
